# TIN CEILINGS

WALLS & UNIQUE METAL WORK

**T**in ceilings of the 1890's are popular again. Do you remember seeing your first tin ceiling? Have you ever heard the saying, "What goes around, comes around"? Many things from the past that are kept around long enough come back into style. Fortunately for home restorers and new home owners, the unique and elegant look of the tin ceiling is back. This is due to the increased interest in restoration over the past few years, and also the nostalgia craze in both residential and commercial construction.

It is not uncommon to see a tin ceiling at your favourite pub or restaurant. Home owners are also using the unique look of tin ceiling designs to open up a whole new area for decoration and design.

- Our tin panels are 2' x 2' (24" x 24") for an easy installation.
- They can be nailed, screwed, glued, or can be applied to t-bars.
- Many different finishes can be applied to the panels to give a more bright or antique finished look to add to your room. Some of our finishes are bright tin, bright chrome, bright copper, bright brass, antique copper, antique brass, antique pewter, and powder coated. Panels can also be painted any colour to match the colours in your room.
- Our noseings moldings, fillers and cornices come in 4' (48") lengths (and have safety hems).
- Nails, screws and tools are available for installation.
- Custom orders of any design or size are also available.

Our products have been shipped across the United States (to every State), across Canada (to every Province), Hong Kong, England, Ireland, Mexico, Switzerland, and many more.

Many publications as well as TV productions have featured our tin ceilings and unique metal work. Some of these include; Tin International, CityTV, Breakfast Television, Canadian Home Workshop, Black & Decker's Building and Finishing Walls and Ceilings, The Toronto Star and many more.

Thank you for your inquiry about my tin ceilings. I have many new reproduction panels, noseings, moldings, fillers, cornices, and specialty items, that you can use to create a beautiful ceiling. In addition, I also have many original antique panel patterns that have been carefully removed from the ceilings of old buildings. As well, if you have a specific design in mind that I don't have, I will be happy to custom make it for you. I have over 40 years of experience in creating specialty and unique items using tin, copper, brass, stainless steel and many other metals.

The panels are made 2' x 2' (24" x 24") in size, making for a safe, quick and easy installation. Noseings, moldings, fillers, and cornices come in 4' (48") lengths, with various widths. These pieces give a finished look to your room, and come with safety hems for a safer and more comfortable handling.

Installation is simple. Our tin pieces can be put up using nails, screws, staples, adhesives or by placing them in a t-bar (gridwork/drop ceiling).

All of our pieces are made of bright tin plated steel and vary in design and size. They can also vary in the finish (plating), from bright tin, bright chrome, bright copper, and bright brass, to antique copper, antique brass, and antique pewter. I can also powder coat them, or you can paint the pieces to your personal preference. Reproduction panels have a beautiful bright tin coating, so if you decide not to plate or paint them, you can install them just as they are.

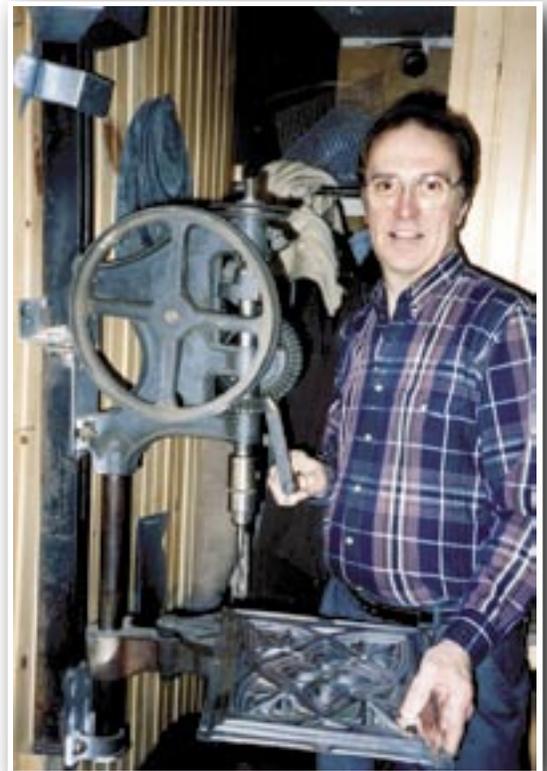

Your job will be quoted on the total material needed and the cost of shipping it directly to your door.

Once again, thank you for your interest, and I look forward to hearing from you soon!

Sincerely,

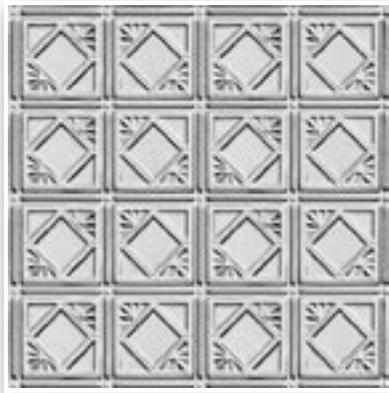

Brian Greer

## Layout Suggestions For Rooms

Our Panels have been installed on:

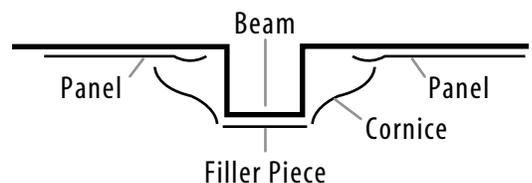

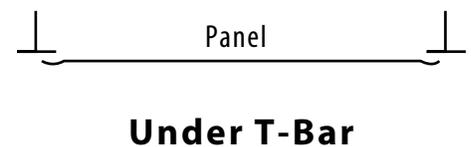

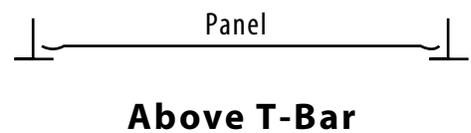

- Ceilings
- Walls
- Store Display Windows
- Backsplash Areas
- Display Counters
- Around Fireplaces
- Cupboards
- Doors
- Accent Pieces
- Mirrors
- Wainscotting
- Head Boards
- Heat Shields around Stoves and more...

## Ceiling Installation Diagrams

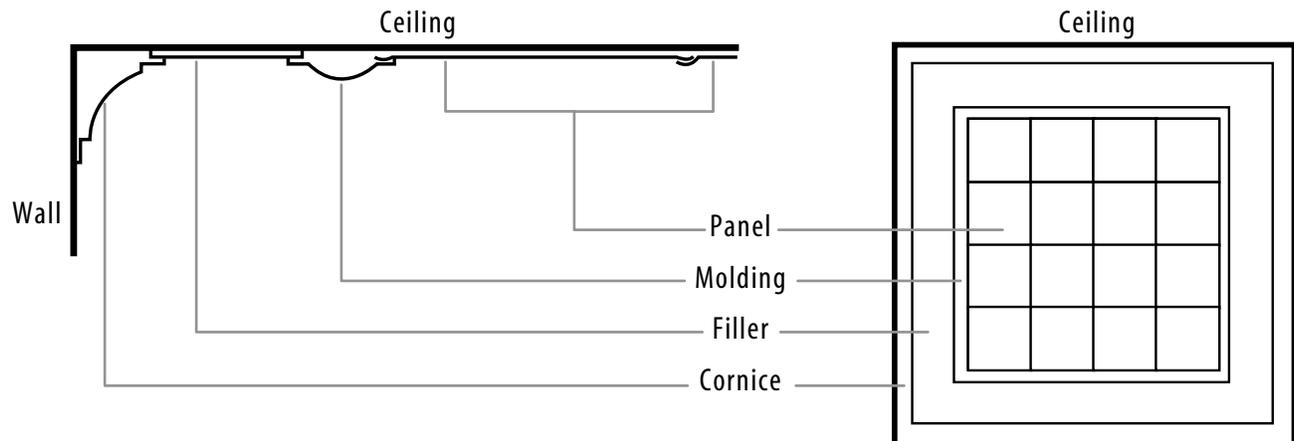

## T-Bar and Beam Installation

**Around a Beam**

## Installation Tips

1. Draw a plan to scale of your ceiling or wall, showing the layout of the panels, moldings, fillers, and cornices you wish to use.
2. Cover your ceiling or wall with wood (most commonly used is mahogany or plywood), making sure the work area is level, flat and smooth.
3. Transfer your layout plan to the ceiling or wall by making a grid work with a chalk line.
4. The installation starting point will depend on which design layout you have selected.
  - Panels – begin at the farthest wall or most seen area from the main entrance of the room and work in rows back towards the main entry.
  - Medallion and/or Centre Panels – begin in the centre of the room and work your way out and around the surface.
5. Begin installing by overlapping the panels, moldings, fillers, and cornices, making sure these items 'lap away' from the prevailing light, main entrance, or main viewing area.

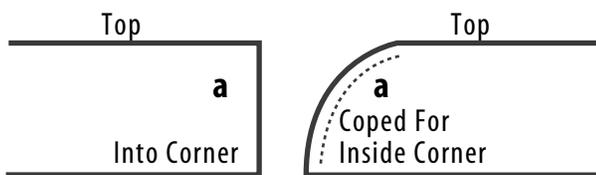

6. Nail approximately every 6" around the outside edges of the tin panel.

Use one of the following:

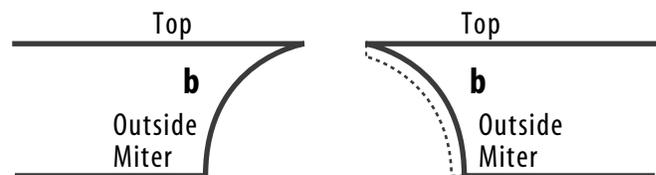

- Dome head nails (can be purchased with panels)
- #4 pan head screws (can be purchased with panels)
- Air operated nailer or stapler (eg. brad nailer)
- Industrial strength panel adhesive

7. Miter the cornice corners (inside corners are coped, outside corners are mitered).

### Coped Joints

### Mitered Joints

8. Tap any loose seams together with a small piece of wood.
9. Caulk panel, molding, filler, and cornice seams to create a smooth and tight fit.
- Painted panels – use painter's caulking
  - Plated and/or bright tin panels – use a clear caulking at your discretion (sometimes not needed)
10. Panels can be painted or left in bright tin depending on personal preference.
- If painted – use a bonding primer that will adhere to metal, then finish with oil or latex paint (oil is preferred)
  - If left in tin finish – coat with a clear lacquer or polyurethane (It is always best to do a test spot before starting)
